## CONTENTS

GENERAL INSTRUCTION .....	4
METHODOLOGICAL EXPLANATIONS .....	5
GENERAL ECONOMIC INDICES .....	20
BASIC ANNUAL DATA .....	21
BASIC QUARTERLY DATA .....	23
INDUSTRY	
Industrial production volume indices by activity.....	38
Indices of final product stocks.....	40
Indices of employees in industry .....	42
Turnover indices in industry, total .....	44
Turnover indices in industry on domestic market .....	46
Turnover indices in industry on non-domestic market.....	48
Industry-production of selected goods .....	50
CONSTRUCTION	
Completed construction works by business entities engaged in construction activity .....	51
TRANSPORT	
Postal traffic .....	52
TRADE	
Balance of external trade .....	53
External trade by economic groups of countries.....	54
Turnover in trade.....	55
Turnover in catering trade and services, tourism and nights spent by tourists .....	56
PRICES	
Price indices .....	57
Industrial producer price indices on the domestic market .....	58
Industrial producer price indices on the non-domestic market .....	59
Industrial producer price indices, total .....	59
Price indices in agriculture .....	60
Retail price indices.....	61
Indices of retail prices of goods and services .....	62
Retail prices by towns.....	64
Consumer price indices .....	65
Chain indices .....	66
EMPLOYEES AND WAGES	
Employed and unemployed persons by age groups.....	67
Unemployed persons, 2019-2024 .....	67
Average net wage per employee.....	68
NATURAL CHANGE OF THE POPULATION .....	71

## GENERAL INSTRUCTION

The Monthly Statistical Bulletin is one of the oldest editions of the State Statistical Office, in which data for the last month, as well as statistical series for a longer period of time are published.

Following the requests of users, as well as the changes in the statistical system of the Republic of North Macedonia, the State Statistical Office has included new topics in the Bulletin.

The data in the Monthly Statistical Bulletin are preliminary data, and minor errors and omissions are corrected in the next issues of the Bulletin.

The part on "Methodological explanations" contains explanations on the used methodology and the method of data collection, which should make easy the use of data.

All data published in the Monthly Statistical Bulletin are a result of the work of the official statistical institutions and therefore represent official data.

## SYMBOLS AND ABBREVIATIONS

-	no entry
...	data not available
∅	average
0	value is less than 0.5 of the unit of measure being used
0.0	value is less than 0.05 of the unit of measure being used
1)	footnote beneath table
( )	incomplete or insufficiently verified data
*	corrected data
:	confidential (individual) data
...*	index is above 1000
	covered by data in direction of the sign
(CV>=25)	inaccurate estimate, other than zero

## **METHODOLOGICAL EXPLANATIONS**

### **GROSS DOMESTIC PRODUCT**

The quarterly gross domestic product calculations are based mainly on the short-term indicators produced by the State Statistical Office and other relevant institutions.

The data for the respective quarter are published as estimated data. Along with the publication of data for each quarter, revised data for the previous quarters are also published. With each revision of the annual gross domestic product data, a revision of the quarterly gross domestic product data is done, as well.

#### **Definitions**

Gross domestic product at market prices is the final result of the production activity of the resident producer units and is a sum of the gross value added of the various institutional sectors or the various industries at basic prices plus value added tax, import duties less subsidies on products (which are not allocated to sectors and industries).

Value added at basic prices is the basic category of the gross domestic product and it is defined as a balance between the gross output and the intermediate consumption.

The GDP according to the expenditure approach presents the final consumption, i.e. the consumption of final goods and services produced in the domestic economy, the gross capital formation and the net export and import of goods and services.

#### **Data sources**

For quarterly GDP estimations the following sources are used: annual GDP estimations, data from the Ministry of Finance for the respective quarter, data from the National Bank, data from the regular monthly and quarterly surveys of the State Statistical Office and additional data from different institutions.

#### **Method of calculation**

Gross domestic product at constant prices is calculated by using the double indicators method. Quarterly GDP growth rates by production approach are calculated using 2005 as a reference year. Because of the chain-linking method applied in the calculations, non-additivity of the data appears.

For the calculation of final consumption at current prices data from the Household budget survey are used, as well as administrative data sources and other relevant sources.

The calculation of Gross capital formation is based on the commodity flow method in the part for machinery and equipment and on the data from surveys in the State Statistical Office that are used for estimation of construction and change in inventories. Data on export of goods and services and import of goods and services are calculated on the basis of the data from the National Bank of the Republic of North Macedonia.

## **INDUSTRY**

### **Sources and methods of data collection**

Sources of data are the results from the Monthly Report on Industry IND.1 for industrial production, stocks and persons in paid employment in the field of industry and Monthly Report for Turnover in Industry, IND.2.

The reporting method is used for collecting data. The reporting units send their Monthly Report on Industry and Monthly Report for Turnover in Industry to the regional statistical office within a specified time frame, according to the Programme for Statistical Surveys in the Republic of North Macedonia for the determined year.

The data sources are the book keeping and the personnel records, as well as the documentation available at the reporting unit.

### **Coverage and observation units**

In the Monthly Report on Industry the observation units are the enterprises and the local units, which according to the National Classification of Activities are distributed in the industry sections: B - Mining and Quarrying, C - Manufacturing Industry and D - Electricity, Gas, steam and Air Conditioning supply, while in the Monthly Report for Turnover in Industry, section D - Electricity, Gas, Steam and Air Conditioning supply is excluded.

The Monthly Report on Industry, IND.1 and Monthly Report for Turnover in Industry, IND.2, also includes the local units whose main activity is industry, even though their parent enterprise does not belong to industry, but to forestry, construction etc. The enterprises that operate in more than one municipality are divided in as many units as there are municipalities they operate in.

### **Calculation method**

The industrial production index for different levels of the National Classification of Activities (total, main industrial groupings, sections, divisions and groups of products) is calculated in two steps: in the first step the indices are calculated by weighting the individual indices of the quantities of industrial products, and in the second step, by weighting with adequate weight coefficients for different activity levels.

The monthly industrial production index is calculated by the Laspeyres formula and is used for calculation of other indices.

Weights of individual products of the National Nomenclature of Industrial Products used in the calculation of the Industrial Production Index represent the value added to the unit production of a respective product. They are calculated on the basis of unit values of the Industrial Annual Report for each year and are revised annually.

The structure of industrial activities (division structure) was calculated on the basis of the value added for each year and is updated at the beginning of every year for the calculation of indices for the current year.

Indices of stocks are calculated on the basis of the volume of stocks of industrial products, on the last day of the reporting month.

Indices of the persons in paid employment in the field of industry are calculated from the data on persons employed by type of activity.

In this publication production volume indices are presented on the fixed base year 2021 in order to harmonize them with the Regulation No.1197/2020 of the European Commission on Short-Term Business Statistics and its amendments where is prescribed implementation of the new base year 2021.

The indices of turnover in industry for different levels of the National Classification of Activities - NKD Rev.2 (total, main industrial groupings, sections, divisions, groups of products) are calculated as three types of indices: indices of turnover in industry, total, indices of turnover in industry on domestic market and indices of turnover in the industry on non-domestic markets. The weights for the turnover in the industry, total, is the value of the turnover from the final accounts of the enterprises for 2021, by kind of activity, aggregated at the level of groups of products, i.e. to three digits of NKD Rev.2. The weights for the turnover in the industry on non-domestic markets is the value of the turnover of the enterprises realized from the export of their own production, by kind of activity, aggregated at the level of groups of products, i.e. to three digits of NKD Rev.2, according to the structure of the value of the export from the "External Trade, 2021". The weights for the turnover in the industry on domestic market are performed as a difference from the weights of the turnover in the industry, total and the weights for the turnover in the industry on non-domestic markets. The weights are changed every five years, and 2021 is used as a base year.

### **Classifications**

Classifications used for the Monthly Report on Industrial Production, Stocks and Employees in Industry and Monthly Report for Turnover in Industry, and for publishing of the results are: the National Classification of Activities (according to the Decision on the National Classification of Activities published in Official Gazette of the Republic of Macedonia No. 147/2008) and the National Nomenclature of Industrial Products 2017 (Official Gazette of the Republic of Macedonia No.136/2018).

### **Recommendations**

The Monthly Report on Industry, IND.1 and Monthly Report for Turnover in Industry, IND.2 are based on the EUROSTAT Recommendations in the Methodology for Short-Term Business Statistics, 2021, and are harmonized in accordance with the Regulation No.1197/2020 of the European Commission on Short-Term Statistics.

## **CONSTRUCTION**

### **Sources and methods of data collection**

The data are obtained from the Monthly Statistical Report on Construction - GRAD. 21.

### **Coverage**

The Monthly Statistical Report on Construction - GRAD. 21 covers the largest business entities engaged in construction activities, as well as business entities that according to National Classification of Activities - NKD Rev.2 are not classified in the construction industry, but they perform some construction activities of larger extent. This scope covers more than 90% of the total value of the completed construction works in the Republic of North Macedonia.

### **Definitions**

The value of completed construction works represents a value of really completed construction works (regardless if they are paid on unpaid) from the beginning of the year till the end of the reporting month. The value of completed construction works is obtained from the business entities' monthly reports, and is given in thousand denars, at current prices.

The data on effective hours refer to all employees with employment contracts according to the human resources records and include the hours realized in regular or overtime work, regardless if they are paid per hour or piece.

The number of employees refers to the situation on the last working day of the reporting month, but only for employees with employment contract according to the human resources records, regardless if they are unable to work or absent because of illness. The students attending practical work are not included.

### **Classifications**

The construction works which are covered by the Monthly Statistical Report are in accordance with the Nomenclature of Constructions and Construction Works, which is made according to the classifications of Eurostat: for the part of the constructions the Classification of Types of Constructions is used, and for the part of construction works the statistical Classification of Products by Activity is used.

This adjustment of statistical surveys enables international data compatibility.

## **TRANSPORT AND OTHER COMMUNICATIONS**

### **Source and methods of data collection**

#### **Passenger transport**

The data are collected according to the reporting method through the quarterly statistical reports in the field of passenger transport, according to the Programme for Statistical Researches in the Republic of North Macedonia.

#### **Urban-suburban transport**

The data are collected according to the reporting method through the quarterly statistical reports in the field of urban-suburban transport, according to the Programme for Statistical Researches in the Republic of North Macedonia.

#### **Railway transport**

The data are collected according to the reporting method through the quarterly statistical reports in the field of railway transport, according to the Programme for Statistical Researches in the Republic of North Macedonia.

#### **Air transport**

The data are collected according to the reporting method through the quarterly statistical reports in the field of air transport, according to the Programme for statistical researches in the Republic of North Macedonia.

#### **Post and telecommunications traffic**

The data are collected according to the reporting method through the regular monthly statistical reports in the field of post and telecommunications traffic, according to the Programme for Statistical Surveys in the Republic of North Macedonia.

Since 2003, the data on mobile phones are collected through the regular monthly statistical reports on mobile phones, according to the Programme for Statistical Surveys in the Republic of North Macedonia.

#### **Freight road transport**

The data are collected according to the stratified purposive sample by weekly monitoring of the work performance of the chosen vehicles from the sample.

### **Scope**

#### **Passenger transport**

Reporting units are all business subjects that according to the National Classification of Activities - NKD Rev.2 are in the section H, in the class: 49.39.

#### **Urban-suburban transport**

Reporting units are all business subjects that according to the National Classification of Activities - NKD Rev.2 are in the section H, in the class: 49.31.

#### **Railway transport**

Reporting units are all business subjects that according to the National Classification of Activities - NKD Rev.2 are in the section H, in the class: 49.10; 49.20

#### **Air transport**

Reporting units are all business subjects that according to the National Classification of Activities - NKD Rev.2 are in the section H, in the class: 51.10; 51.21.

#### **Post and telecommunications traffic**

Reporting units are all business entities that according to the National Classification of Activities - NKD Rev.2 are in the section H and J, in the class: 53.10; 61.10; 61.20.

#### **Freight road transport**

Reporting units are the road freight vehicles (including road tractors, also) property of legal and private subjects with freight capacity more than 3500 kg registered in the Ministry of Interior.

### **Definitions**

#### **Passenger transport**

Kilometers run by the vehicle - kilometers run during the period of the reporting quarter are shown regardless if the ride was in function of transport or not.

Passenger - any person who purchases a ticket and enters in a bus for transport to a determined place.

Passenger - kilometer is a unit of measurement representing the transport of one passenger over a distance of one kilometer.

### **Urban-suburban transport**

Transport of passengers - refers only to the transport performed at the urban and suburban lines in the urban area (taxi transport is not covered).

Vehicle kilometer - a unit of measurement representing the movement of a road motor vehicle over a distance of one kilometer. It includes movements of empty road motor vehicles (without passengers).

### **Railway transport**

Data on passengers transported cover all the passengers transported with railway cars in the national and international transport.

Data on goods transported cover all transported goods with railway cars in the national and international transport.

Loaded goods - all goods loaded in national and international transport.

Unloaded goods - all goods unloaded in national and international transport.

Passenger is each person who uses railway car for transport, except for the crew of the railway car.

Passenger-kilometer is a unit of measurement representing the transport of one passenger by rail over a distance of one kilometer.

Goods transported represent a sum of all goods transported with railway cars.

Net-tonne kilometer is a unit of measurement of goods transport which represents the transport of goods in one wagon by rail over a distance of one kilometer.

### **Air transport**

Data on passengers transported include all passengers who have arrived and departed in regular and charter transport.

Data on goods transported include all goods that have arrived and departed in regular and charter transport.

### **Post and telecommunications traffic**

Data on mail parcels refer to mail parcels of ordinary and registered letters, postcards, printed materials, telephone bills, small packages, EMS letters delivered in the national and international traffic.

Data on parcels refer to parcels of ordinary, letters of value, hand and EMS letters delivered in the national and international traffic.

Telephone calls originated from fixed network - Include all calls that originated from the network of the national fixed operator, expressed in 1000 minutes, such as national calls (within the country), international calls (outgoing calls to another country), dial-up connection to Internet and others.

Calls originated from mobile cellular network - Include all national and international calls originated from subscribers to the national mobile operators expressed in 1000 minutes. Roaming calls are not included.

National calls from mobile cellular network - Total calls, in 1000 minutes, originated from subscribers to the national mobile operators and made within the country (originated and terminated in the Republic of North Macedonia).

### **Freight road transport**

Kilometers run by the vehicle represent the kilometers run by the vehicle with freight or empty.

Ton of goods is a unit of measure which represents the weight of goods.

Tonne-kilometer is a unit of measurement which represents the transport of one tonne by road over one kilometer.

### **Classifications**

Glossary for Transport Statistics

Eurostat Council Regulation 1172 /98 on Statistics on the Carriage of Goods by Road

Classification of Countries, ISO-3166

Classification of Goods, NST

Classification of Categories of Dangerous Goods ADR

Classification of Cargo Types

Eurostat Council Regulation 91/2003 on rail transport statistics

Eurostat Council Regulation 437/2003 on statistical returns in respect of the carriage of passengers, freight and mail by air

## **EXTERNAL TRADE**

### **Data source**

The data source for the external trade statistics is the Single Administrative Document (SAD) for exports and imports, whose content is adjusted for various purposes. The document is filled in with data for customs purposes, as well as for statistical and banking purposes.

The contents, the form and the way of filling in of the SAD are prescribed by the Manual for the Single Administrative Document and the other documents in the customs procedure.

### **Data scope**

The external trade data are processed according to the special trade system (relaxed definition), based on the concept of the commodity crossing at the customs border.

The export, according to this principle, comprises all the goods exported abroad and in the foreign customs warehouses and industrial free zones, and whose origin is from the domestic market, the premises for further processing and the industrial free zones.

The import comprises all goods, imported from abroad, from customs transit, customs warehouses and industrial free zones. That means that import includes all the goods for which all duties and taxes are paid, and which are placed on the internal market, the premises for further processing or in the commercial free zones.

### **Observation units**

Observation unit for the statistical survey on external trade of goods is each dispatch of goods in exports or imports, which is homogenous regarding the kind of goods, country of origin or destination, way of payment and the moment of border crossing.

### **Territory**

The borders of the statistical territory are usually the same as the state borders, except when the external trade is performed through the free customs zones.

### **Time of observation and processing**

Statistical processing of external trade data is performed on a monthly basis.

Export and import data are processed in the month in which the transaction is done, according to the time of lodgement the SAD form. Monthly data for the current year are corrected regularly each month. With the first data processing, about 98% of the total data are compiled. The additional data and the corrected data are added in the month when the goods transaction was done (the time of lodgement the SAD form). Because of this, the external trade data during the current year are treated as preliminary, until the final data are published.

### **Classifications**

Statistical data processing and publishing are performed according to the following classifications and nomenclatures:

- Customs Nomenclature, based on the Harmonized System of Commodity Codes and Names;
- Standard International Trade Classification (SITC)
- Classification of products by activity (CPA)
- Classification of broad economic categories (BEC)
- Country Nomenclature - 3166 ISO alpha - 2 code

The basic principles, standards, definitions and procedures for statistical processing of the external trade are based on the United Nations concepts and definitions for the external trade statistics (International Trade Statistics: Concepts and Definitions United Nations Statistical Papers, 2010 Series M, No.52, Rev 3), on which the External Trade Methodology of the Statistical Department of the European Union (EUROSTAT) is also based.

## INTERNAL TRADE

### Sources and methods of data collection

Sources of data are the results from the Monthly Report on Turnover TRG.1 for turnover, number of persons employed and hours worked. The data are collected according to a stratified sample.

### Scope

Observation units are mostly the enterprises whose principal activity is classified into sale and maintenance of motor vehicles, wholesale trade and retail trade.

The sampling frame of the survey includes all legal forms of enterprises that perform one of the trade activities in section G of the National Classification of Activities - NKD Rev. 2 as their main activity. The sample includes all large and medium business entities, while the rest were determined randomly. The criteria used are activity and turnover.

### Definitions

**Wholesale** is purchase of goods for further sale to merchants, entrepreneurs, legal persons and others that purchase goods for performing their professional or profit-making activity.

**Retail trade** is purchase of goods for further sale to final users (for personal and household use).

**Turnover** comprises the totals invoiced by the observation unit during the reference period, and this corresponds to market sales of goods or services supplied to third parties. Turnover includes all taxes for goods and services, invoiced by the observation unit, except VAT. Turnover also includes all other charges (transport, packaging, etc.) passed on to the customer, even if these charges are listed separately in the invoice. Price reductions such as rebates, bonuses or discounts as well as other revenue reductions (e.g. annual discount schemes) are to be deducted from turnover.

Turnover does not include:

- Extraordinary income (e.g. from sales of capital assets),
- Non-operating income (e.g. income from letting or renting buildings used for no operating purposes),
- Financial income (e.g. interest payments, dividends from associated companies),
- Company-related subsidies.

### Data publishing

Data published are shown in the form of indices. The data were calculated with 2021 as a constant base year, and calculated indices are not seasonally adjusted.

The indices reflect the short-term changes in the turnover between two compared periods. These are generally the reported month to the same month of the previous year.

**Value indices** (value in nominal terms): current prices are considered, and the impact of the change in prices is not eliminated.

**Volume indices** (value in real terms): by using deflators made up of consumer price indices the change in prices is eliminated.

Retail trade data are given by the following groups: Retail sale of food, beverages and tobacco (G47.11, 47.2); Retail sale of non-food products, except fuel (47.19, 47.4, 47.5, 47.6, 47.7, 47.8, 47.9); Retail trade, except automotive fuel (47 without 47.3) and Retail trade of automotive fuel (47.3).

## PURCHASE AND SALE

### Sources and methods of data collection

Data on the total purchase of agricultural products are taken from the regular monthly statistical surveys Purchase of Agricultural Products from Individual Producers (trade-31) and Sales of Agricultural Products from Own Production of Agricultural Enterprises and Agricultural Cooperatives (Agri-Trade - 33), which are used for monitoring 140 agricultural products.

### Scope

As reporting units for these surveys occur all legal units (enterprises and agricultural cooperatives) that according to the National Classification of Activities are registered in the sector A, division 01, sector B, division 05, as well as enterprises that have registered local unit in the sectors A and B.

### Definitions

Purchase of agricultural products from individual agricultural producers is purchase of agricultural products directly from the individual agricultural producers by enterprises, for processing or selling.

Sale of agricultural products from own production is external or internal sale and delivery of agricultural products from enterprises and agricultural cooperatives' own production.

### Method of calculation

Indices are calculated by a relation between the monthly values at the level of products, groups and total, in the current and the base year.

### Classifications

Data are presented according to the National Classification of Activities- NKD Rev.2, while the products are partly adjusted to the Classification of Products by Activities (CPA 2008).

## CATERING TRADE AND SERVICES

### Source and methods of data collection

The data are collected according to the reporting method through the regular quarterly statistical reports submitted by all business entities whose main activity is catering and other business entities which contain units that offer catering services.

### Scope

Reporting units are all business entities that according to the National Classification of Activities - NKD Rev.2 are in the sector I, in the divisions 55 Accommodation and 56 Food and beverage service activities, as well as the business entities which in their structure have business units whose activity belongs to these divisions.

### Definition

Turnover in catering trade and services is a value of realised board and lodging services, and other goods and non-goods services (like selling of tobacco, souvenirs, transport of guests and luggage, postal services, etc.) The value of turnover is expressed in current prices, including VAT.

Data on turnover by months are estimations obtained on the basis of analysis of the usual monthly seasonal variations and estimations of the turnover trend. These estimations, after the end of the quarter, are corrected on the basis of the results of the quarterly reports.

## TOURISM

### Source and methods of data collection

The data are collected according to the reporting method through the regular monthly statistical reports submitted by all accommodation establishments and other business entities engaged in tourism accommodation (hotels, boarding houses, motels, vacation facilities, camps, etc.)

### Scope

**Reporting units** are all business entities that according to the National Classification of Activities - NKD Rev.2 are in the sector I, in the division 55 Accommodation, as well as business entities which in their structure have business units whose activity belongs to this division.

Nevertheless, certain number of tourists and their nights spent are not included, because tourists, particularly those in private rooms, cottages and those staying with relatives and friends, remain unreported.

### Definitions

**Tourist** is any person who temporarily spends at least one night in some accommodation establishment not located in his or her usual place of residence.

**Domestic tourist** is a person with permanent residence in the Republic of North Macedonia who is temporarily present at some other place, other than his/her usual place of residence, and who spends at least one night in some accommodation establishment.

**Foreign tourist** is considered to be anyone, permanently resident outside the Republic of North Macedonia, who is temporarily present in the Republic of North Macedonia and who spends at least one night in some accommodation establishment.

The actual definitions are harmonised with the Regulation (EU) No.692/2011.

## INDUSTRIAL PRODUCER PRICES

### Goals

The industrial producer price indices, total, measure the changes of the industrial producer price levels of the industrial products/services produced in North Macedonia and sold on the domestic market and the non-domestic market. The industrial producer price index, total, is composed of two components: the industrial producer price indices on the domestic market and the industrial producer price indices on the non-domestic market.

The industrial producer price indices on the domestic market measure the changes of the industrial producer price levels of the industrial products/services produced in North Macedonia and sold on the domestic market.

The industrial producer price indices on the non-domestic market measure the changes of the industrial producer price levels of the industrial products/services produced in North Macedonia and sold on the non-domestic market.

### Definition

The Industrial producer price is the price at which the producer sells the products/services to the network of wholesale and retail distributors in the largest quantities, on the domestic market, loaded free on rail or truck where the producer is located, or it is the price based on which the producer deals with other producers in the sphere of trade. This price includes producer subsidies, but deducts commercial rebates, discounts, cash discounts and similar reductions offered by the seller. VAT and excises are also deducted from the price.

The Industrial producer price on the non-domestic market is the price at which the producer sells the products/services in the largest quantities, on the non-domestic market, with FOB (free on board) clause, which means that the cost of transport and insurance to the Macedonian border are included in the price. Commercial rebates by the seller are deducted from this price. VAT is also deducted from the price.

The average monthly price of a product/service is calculated when the total monthly value (according to the definitions given above) of that product/service is divided by the total quantity of the same product/service sold in that month.

### Method of calculation

The industrial producer price indices, total, are calculated as the weighted average of the industrial producer price indices on the domestic market and the industrial producer price indices on the non-domestic market.

The monthly industrial producer price indices, both on the domestic and non-domestic market, are calculated with the Laspeyres formula.

$$I_{t/o} = \frac{\sum_{i=1}^n \frac{P_{ti}}{P_{(oi)}} * W_{oi}}{\sum_{i=1}^n W_{oi}}$$

$I_{(t/o)}$	- index
$P_{(ti)}$	- price of the product "i" in the current month
$P_{(oi)}$	- price of the product "i" in the base period
$W_{(oi)}$	- weight of the product "i" in the base period
n	- number of products

For weighting, the turnover on the domestic market and non-domestic market for each product of each reporting unit is used. The weights are changed every 5 years.

## INPUT AND OUTPUT PRICES IN AGRICULTURE, AND PRICES OF CATERING SERVICES

### Sources and methods of data collecting

Sources of data on input and output prices are the monthly reports gathered from business entities engaged in wholesale trade, cooperatives and agricultural holdings that sell goods for current consumption in agriculture and products from agricultural production sold outside the sector.

The prices of catering services measure the level of the retail prices of catering services carried out in catering units (hotels, motels and restaurants).

The prices of catering services are monitored with the survey C.31 in selected catering units: hotels with restaurants, motels with restaurants and restaurants, in the period from 18th-20th of a month. Prices are monitored from the menu with quoted sell-prices on the day of monitoring. Units of measurement according to which prices are monitored are quoted in the survey form and they are usual for the selected products and services.

### Scope

Input prices in agriculture are monitored monthly for products that business entities sell to individual agricultural producers for current uses in agricultural production.

Output prices in agriculture are monitored monthly for agriculture products that business entities purchase from individual producers, as well as sales of agricultural enterprises' own production.

Price indices of catering services are monitored monthly in 27 selected business units for 65 catering services in 8 cities in the Republic of North Macedonia.

### Definitions

**Input in agriculture** covers goods, services and investment that agricultural producers invest currently for continuous development in agricultural production. **Output in agriculture** covers production in the agricultural sector, purchased or sold outside the sector.

**Input prices** are prices that agricultural producers have paid for purchasing the necessary goods and for the performed services and the investments which were necessary for unobstructed agricultural production. VAT is deducted from the prices. **Output prices** are prices paid to agricultural producers for purchasing agricultural products, or for sales from agricultural enterprises' own production. VAT is deducted from the prices.

**Prices of catering services** are prices at which catering units sell their services to customers for food, beverages and accommodation. VAT is included in the prices.

### Method of calculation

Input and output price indices in agriculture are calculated by weighting the price indices, based on the share (2018-2020) of the average value of purchased products at purchase prices (input) and the average production value (2018-2020) at current prices (output).

Given the seasonal nature of agricultural production, and especially vegetables and fruits, variable monthly weights are used when calculating price indices. The weights are calculated based on the participation of certain products in the months during the year.

The price index of catering services is calculated by weighting the price indices with the structure of values of services realized in the catering units.

Price indices are calculated by using Laspeyres formula:

$$I_{t/o} = \frac{\sum_{i=1}^n \frac{P_{ti}}{P_{(oi)}} * W_{oi}}{\sum_{i=1}^n W_{oi}}$$

$I_{(t/0)}$	- index
$P_{(ti)}$	- price of the product/service "i" in the current month
$P_{(oi)}$	- price of the product/service "i" in the base period
$W_{(oi)}$	- weight of the product/service "i" in the base period
$n$	- number of products/services

### Classifications

Data on output price indices in agriculture are collected and calculated according to the National Nomenclature of Agricultural Products and Services.

## CONSTRUCTION COSTS FOR NEW RESIDENTIAL BUILDINGS

The Construction cost Index for new residential buildings is calculated as a weighted average of the Material cost index and the Labour cost index:

$$I_{(cc)t/o} = I_{(mc)t/o} * W_{o1} + I_{(lc)t/o} * W_{o2}$$

- $I_{(cc)t/o}$  - Construction cost index for new residential buildings
- $I_{(mc)t/o}$  - Material cost index
- $I_{(lc)t/o}$  - Labour cost index
- $W_{o1/2}$  - Weights
- $W_{o1} + W_{o2} = 1$

The Material cost index is calculated on the basis of data on Industrial producer prices on the domestic market, for products belonging to these classes:

08.11; 08.12; 16.10; 16.23; 20.16; 20.30; 20.52; 20.59; 22.21; 23.12; 23.20; 23.32; 23.51; 23.61; 23.62; 23.63; 23.64; 23.69; 23.70; 24.20; 24.34; 25.11; 25.93; 27.32.

The Material cost index is calculated by using by the Laspeyres formula:

$$I_{(mc)t/o} = \frac{\sum_{i=1}^n \frac{P_{ti}}{P_{oi}} * W_{oi}}{\sum_{i=1}^n W_{oi}}$$

- $I_{(mc)t/o}$  - Material cost index
- $P_{ti}$  - Price of the building material "i" in the current period (t)
- $P_{oi}$  - Price of the building material "i" in the base period (0)
- $W_{oi}$  - Weights
- t - Current period
- 0 - Base period

The Labour cost index is calculated on the basis of the average gross wages paid per employee in the Construction section, Division 41 - Construction of buildings, from the National classification of activities (NKD Rev.2).

$$I_{(lc)t/o} = \frac{S_t}{S_0} * 100$$

- $I_{(lc)t/o}$  - Labour cost index
- $S_t$  - Average gross wage paid per employee in the current period (t)
- $S_{oi}$  - Average gross wage paid per employee in the base period (0)
- t - Current period
- 0 - Base period

## RETAIL PRICES AND CONSUMER PRICES

Data on **retail prices** of goods and services are the result of regular monitoring of prices, including agricultural and industrial retail prices, as well as service prices. Retail prices are monitored in 8 cities in the Republic of North Macedonia. Prices of industrial products and services are monitored once a month, while agricultural products are monitored twice a month (the first and the third week of the month).

Starting from January 2006, the prices of oil derivatives are monitored from the 26th day of the previous month till the 25th day of the current month, in order to scope all price movements within the reported month.

**Average monthly prices** in the Republic of North Macedonia are calculated by weighted arithmetical mean, whereby average prices in particular cities are weighted with the sold quantity of certain articles in those cities.

Starting from January 2012, average monthly prices by cities are calculated by average-geometrical mean.

Average monthly prices for the agricultural products are calculated as average of both reported periods.

**Average annual prices** of the products and services are obtained by an non weighted average-arithmetic mean of prices for 12 months.

### Scope

In 2012, retail turnover prices are monitored in 8 cities in the Republic of North Macedonia, for 48 agricultural products, 147 food-industry products, 259 non food-industry products and 149 types of services.

When selecting products for monitoring of prices, only products with significant retail turnover are considered.

### Definitions

Retail prices are the prices at which the products and services are sold to the final consumers by retailers, individual producers and service providers. VAT is included in retail prices.

### Price indices

The Retail price index and the Consumer price index are calculated on the basis of average monthly retail prices, their dynamics and the structure of personal consumption.

**Indices are calculated by means of the following formula:**

$$I_{t/o} = \frac{\sum_{i=1}^n \frac{P_{ti}}{P_{oi}} * W_{oi}}{\sum_{i=1}^n W_{oi}}$$

$I_{(t/o)}$  - index

$P_{(ti)}$  - price of the product/service "i" in the current month

$P_{(oi)}$  - price of the product/service "i" in the base period

$W_{(oi)}$  - weight of the product/service "i" in the base period

n - number of products/services

**The Consumer price index** is calculated on the basis of a special list of products and services for personal consumption of households, the average monthly retail prices of these goods and services, and their individual price indices weighted according to a personal consumption pattern.

While calculating the consumer price indices, besides the national classification, COICOP (Classification of Individual Consumption by Purpose) is also used as an international standard, which is a classification of the personal consumption by purpose. It is used by the European Union member states for calculation of the Harmonized Index of Consumer Prices, which is used as an indicator of inflation.

## LABOUR FORCE SURVEY

### Sources and scope of the Survey

The Labour Force Survey is the most exhaustive research on the economic activity of the population and its demographic, educational and other characteristics in the period between the censuses.

The Survey is conducted on a sample of 13 250 households (7 200 households until 2003) on the whole territory of the country. Until 2003, the Labour Force Survey was conducted as an annual Survey and since 2004 it is being conducted as a continuous Survey, on a weekly basis, throughout the year, while the data processing is done quarterly and annually.

Units under observation in the Survey are: the households and the persons from 15 - 89 years of age.

The adherence to the international recommendations of the International Labour Organization (ILO) and the EU Statistical Office (Eurostat) enables international comparability of the data, but it also means application of definitions of the labour market's basic categories that differ from the ones established by the national legislation in this area.

The final concept of the Survey is established taking into account the specifics of the Republic of North Macedonia in this area.

### Definitions

Working age population comprises every person between 15 and 89 years of age.

Economically active population comprises all employed and unemployed persons (labour force).

#### Employed persons are:

- people aged 15-89 who worked during the reference week, even for just one hour, for pay, profit or family gain
- people who did not work, but had a job or business from which they were temporarily absent during the reference week, if the reason of the absence is one of the following: illness, holiday, maternity or paternity leave, industrial dispute, education and training and other reasons but keeping a strong attachment to the job.

#### Unemployed persons are those aged 15-74 who

- were not employed during the reference week
- were available for work, and
- were either actively seeking work in the 4 weeks before the reference week or had already found a job to start within the next 3 months.

**People outside the labour force** are those classified neither as employed nor as unemployed (Pupils and Students, Pensioners, Housewives).

The main indicators for monitoring the changes of the labour force are:

- Activity rate as a share of the labour force in the total population aged 15 years and over;
- Employment rate as a share of the number of employed in the total population aged 15 years and over;
- Unemployment rate as a share of the number of unemployed in the total labour force.

The reporting period to which the questions are related is the week before the week of conducting the Survey.

## **WAGES AND EMPLOYMENT**

### **Sources and scope of statistical survey Labour - 1**

The monthly statistical survey Labour - 1 monitors the average gross and net wages paid per employee, by downloading data from an administrative source (Public Revenue Office - PRO) for business entities on a monthly basis. The source of the data are the reporting units that are in private and other (public, state, cooperative and mixed) ownership with different activities. The survey does not cover the Macedonian representative offices abroad, the persons who independently perform an activity/profession and the persons who work for them, and individual farmers.

The monthly statistical survey is based on a sample of reporting units that has been deliberately selected, respecting the criterion of a minimum representation of 70% of employees in each section of the National Classification of Activities – NKD, Rev. 2. The administrative data taken from the PRO show the total gross and net wages paid per employee in that month.

### **Definitions**

Total paid gross wages cover: paid net wages for the reference month, paid personal tax and paid contributions for: retirement and disability insurance, for health insurance, for employment, for professional disease.

Total paid net wages cover: paid net wages for the reference month for the work done in the full-time work, less than full and more than full-time work (overtime work), payments in respect of annual vacation by the enterprise, as well as public holidays, paid leave up to seven days, paid leave for educational purposes, for sick-leave up to 30 days, etc., payments for time spent in the army upon invitation of a state body, protection and civil services, etc., supplements of net wages for previous months paid during the reference month (backward payments), payments based on periodical and final account, profit-sharing bonuses, regardless of the period they refer to.

The survey includes all employed persons that have a work contract (for definite or indefinite time), as well as whether they work full-time, less than full or more than full-time in business entities of all kinds of ownership and the state administrative bodies, local self-government bodies, the political parties, the public organizations and associations in the Republic of North Macedonia.

This survey does not cover: persons such as Macedonian representatives in foreign countries, persons who perform independently an activity - profession and their employees, and the individual farmers.

### **Methods of calculation and indices**

Average paid gross and net wages per employee are calculated as a ratio between the total gross and net wages and the total number of employees who received payments.

Nominal indices of paid gross wages are calculated from the absolute value of the average gross wages, while the real indices represent the ratio between the nominal indices and the consumer price indices.

Nominal indices of paid net wages are calculated from the absolute value of the average net wages, while the real indices represent the ratio between the nominal indices and the consumer price indices.

## NATURAL CHANGE IN POPULATION

Data on live births, deaths, and marriages are obtained from the civil registration records of the Department for Civil Registration, while data on divorces are obtained from the records of the competent courts

Statistics on births comprise live births and still births.

Statistics on deaths comprise all cases of death.

Statistics on marriages cover the marriages contracted according to the legally prescribed manner, i.e. marriages registered in the Record of Marriages.

Statistics on divorces refer to divorces in the relevant court.

Data are collected monthly, with preliminary monthly and quarterly figures released during the year, and final annual figures published yearly.

Taking into account the need for presenting as realistic a picture as possible of the demographic appearances in the Republic of North Macedonia and to harmonize and implement EU regulations,, starting from 2004, the State Statistical Office made changes in the methodology of presentation of vital statistics. The number of births, deaths, marriages and divorces shows only the events which occurred in the Republic of North Macedonia. Based on this methodology, are calculated all indicators related to vital events.

### Definition of the key indicators

Live birth is any child who after separation (complete removal from its mother) shows any signs of life (breathing or heart beat), irrespective of how long that child was alive. If the child died soon after separation, first it is registered as live birth and then, as an infant death.

Stillbirth (foetal death) is any child separated from the mother's body without any signs of life, but only if the gestation period was not less than 28 weeks.

Deceased person is every live birth in which there is a permanent disappearance of all vital functions.

Infant deaths - deaths of infants before reaching first year of age.

Natural increase of the population is the difference between the number of live births and the number of dead persons in a given period of time. The natural increase can be positive, when the number of live births is higher than the number of dead persons, and negative, when the number of live births is lower than the number of dead persons.

Crude birth rate is a ratio between the number of live births in the calendar year and the same mid-year population (30. 06), multiplied by 1000.

Crude mortality rate is a ratio between the number of deaths in the calendar year and the same mid-year population , multiplied by 1000. The ratio shows how many persons in average were died per 1000 population for a given period and at a given territory.

The rate of natural increase shows the difference between livebirths and deaths during the year divided by mid- year population, multiplied by 1000.

The infant mortality rate is defined as the number of infant deaths per 1000 live births in the reference year:

The rate of stillbirths is defined as the number of stillbirths per 1000 live births in the reference year:

Vital index is relative indicator, which present the relation between number of live births during the calendar year and number of deaths, multiplied by 100.

Nuptiality rates (marriages per 1000 population). Marriages per 1000 population are the ratio between the number of marriages in the calendar year and the same mid-year population, multiplied by 1000.

Divorciality rates (divorces per 1000 population), are the ratio between the number of divorces in the calendar year and the same mid-year population, multiplied by 1000.

Divorces per 1000 marriages, are the ratio between the number of divorces in the calendar year and the number of marriages, multiplied by 1000.

<sup>1)</sup> Provisional data for 2024, 2025 and 2026.

a. Revision of data has been done in September 2025 in the following categories:

- for 2024: Direct Investment, Primary Income, Secondary Income, Capital Account, due to inclusion of data from the annual FDI Survey VS 11 and VS 22;
- all components for 2024 - as a result of improved coverage of data;
- for 2023: Goods, Services and Trade credits data due to the final data on foreign trade.

b. Revision of data has been done in September 2024 in the following categories:

- for 2023: Direct Investment, Primary Income, Secondary Income, Capital Account, due to inclusion of data from the annual FDI Survey VS 11 and VS 22;
- all components for 2023 - as a result of improved coverage of data;
- for 2022: Goods, Services, Primary Income, Secondary Income and Trade credits data due to the final data on foreign trade and improved coverage of data.

c. In June 2014 revision was done in accordance with the Balance of Payments and International Investment Position Manual (BPM6), IMF, 2009.

- For the period 2010-March, 2014 revision was done fully in accordance with the BPM6 recommendations;
- For the period 2003-2009 revision was done on the basis of IMF's BPM5-to-BPM6 conversion matrix, while some balance of payments items with more detailed data were revised as recommended in BPM6;
- More detailed information for the methodological changes is available on the following link: [www.nbrm.mk/information](http://www.nbrm.mk/information)

<sup>2)</sup> Imports data are on fob basis in accordance with IMF VI Balance of Payments Manual.

Calculation of cif / fob factor as % of imports cif is 3.86%.

<sup>3)</sup> Excluding price changes and exchange rate differences.

**INDUSTRY - PRODUCTION OF SELECTED GOODS<sup>1)</sup>**

	Unit of measurement	2025	2026		2026
			february	march	january-march
<b>Mining of metal ores</b>					
Copper concentrates	t	31 955	2 481	2 568	7 745
Lead concentrates	t	52 541	4 039	4 560	12 641
Zinc concentrates	t	45 678	3 481	3 494	10 632
<b>Manufacture of food products</b>					
Refined sunflower-seed and safflower oil and their fractions	t	33 003	3 587	3 317	8 507
Processed liquid milk	t	23 368	1 893	2 565	6 473
Cheese and curd	t	7 930	588	616	1 832
<b>Manufacture of beverages</b>					
Natural strong alcohol from grape wine or grape marc	hl	15 547	1 093	1 969	4 012
Wine of fresh grapes, except sparkling wine, in bottles	hl	202 615	16 655	13 612	44 216
Beer made from malt	hl	659 980	31 785	53 929	113 500
Waters, with added sugar, other sweetening matter (including mineral and aerated)	hl	2 038 533	157 119	164 307	437 556
<b>Manufacture of tobacco products</b>					
Cigarettes	million pieces	2 834	240	321	804
Fermented tobacco	t	11 008	397	1 780	2 287
<b>Manufacture of textiles</b>					
Cotton fabrics	'000 m <sup>2</sup>	700	24	29	71
Furnishing articles including furniture and cushion covers	'000 pieces	10 022	814	886	2 365
<b>Manufacture of wearing apparel</b>					
Workwear	'000 pieces	1 420	107	102	283
Underwear	'000 pieces	7 826	446	409	1 326
Trousers	'000 pieces	2 149	213	206	580
Blouses and shirts	'000 pieces	8 431	677	499	1 731
<b>Manufacture of chemicals and chemical products</b>					
Nitrogen	t	21 819	1 638	1 954	3 585
Oxygen	t	33 164	2 666	4 291	9 755
Detergents and washing preparations	t	1 366	115	117	335
<b>Manufacture of basic pharmaceutical product and preparations</b>					
Commercial medicines	kg	9 487 580	848 955	935 247	2 296 714
<b>Manufacture of other non-metallic mineral products</b>					
Non-refractory ceramic constructional bricks and blocks	'000 pieces	25 189	156	3 082	3 253
Ceramics roofing tiles	'000 pieces	9 945	609	1 019	2 902
Portland cement	t	819 815	45 127	74 771	144 572
Factory made mortars	t	190 318	13 339	14 545	33 599
Marble, worked monumental and articles thereof	t	5 034	420	413	1 022
<b>Manufacture of basic metals</b>					
Ferro-alloys	t	-	-	-	-
Flat-rolled products, of iron or non-alloy steel, hot-rolled	t	286 226	21 578	26 017	73 077
Flat-rolled products, of non-alloy steel, cold-rolled	t	71 524	4 513	7 044	15 770
Tubes and pipes, of steel, welded	t	183 419	11 964	14 371	37 714
<b>Manufacture of fabricated metal products, except machinery and equipment</b>					
Prefabricated workshops and garages, of iron or steel	t	5 428	446	478	1 279
<b>Manufacture of electrical equipment</b>					
Other bases for electric control and distribution of electricity, voltage = 1000V	pieces	15 090 647	1 060 801	1 167 654	3 070 126
Other electric conductors, for a voltage <= 1000V, fitted with connectors	t	3 690	415	443	1 000
<b>Manufacture of motor vehicles, trailers and semi-trailers</b>					
Insulated ignition wiring sets and other wiring sets of a kind used in vehicles	t	38 747	3 729	3 773	10 615
<b>Electricity<sup>2)</sup></b>					
Electrical power - total	MWh	6 467 110	568 816	531 064	1 754 236
Thermoelectric power	MWh	3 488 427	278 251	178 661	796 250
Renewable electricity	MWh	2 978 683	290 565	352 403	957 986
